PRIORITY

EYES ONLY SECRETARY

Further to Embassy telegram 577 the Department may wish to consider my talking informally or officially with Mrs. Meir to suggest some or all of the following:

1. Depending on whether area and international concern growing and Department wishes -- I could suggest we believe it would be useful for GOI -- on its own initiative -- to ask for an IAEA scientific designee to visit nuclear site or internationally known scientists; preferably from U.S. While former would obviously help allay other countries concern, doubt whether B-G would favor it, unless he saw it as act of statesmanship that would benefit Israel and not slow down progress of reactor due to Arab boycott. Visit of international scientists would serve more limited objective of providing fuller and respected information on which suggest IAEA inspection later date.

Still another alternative -- if low key approach preferred -- would be at time of next AEC safeguards inspection of Nahal Rubin reactor (which occurred June 8) to include high level scientist in inspection team -- to visit new reactor and, as appropriate under article I of bilateral, exchange information on "research reactors".

2. At conversation with Mrs. Meir -- or following visit suggested paragraph 1 above if more appropriate -- Department may wish

may wish urge GOI place reactor under IAEA safeguards as agency project. This action could be presented as step by Israel -- clearly on its own initiative -- marking a significant contribution to the furtherance of area tranquility and peace. It would also appear to be consistent with GOI vote in favor of IAEA safeguards general conference last September and with statements of GOI that the reactor is designed exclusively for peaceful purposes.

Possibility of Ben-Gurion being willing to do this would be influenced -- in part -- by position of France, U.S. and UK. Department might wish to initiate, if it has not already done so, consultations along this line with these governments.

Comment A: We understand present foreign exchange financing for nuclear reactor and ancillary facilities being carried out by GOI on basis of substantial supplier credits which it is arranging with various foreign firms. Embassy informed projected cost of total project about 34 million dollars including 17.8 million dollars of foreign exchange and approximately 29.2 million pounds of local currency costs. Because of these substantial supplier credits and serious GOI concern (reflected by Ben-Gurion Embassy telegram 577) over commitments to private firms -- assurances may be necessary to effect technical inspection would not reveal names of firms providing assistance.

Comment B: Until further word received from Department I have instructed ALUSNA Tel Aviv to defer definitive answer CNO re visit Commander Muller and request for his visit to Negev installation if clearance can be obtained. ....
